

BU15 REMOVAL DEVICE FOR BLOCKS

DESIGN

The removal device is designed to extract blocks from moulding machines

The removal device is designed to receive the falling blocks directly below the mold.

The removal device is designed according to customer specifications, and can be delivered with either a table in front of the moulding machine, or delivery systems to chain conveyers in front or behind the machine.

The customer at the center of attention

The Removal device is designed according to customer specifications, and is adaptable to most part sizes.

At CK Teknik we draw and possibly animate all products in 3D, which will cause unforeseen mechanical problems already to be identified and corrected

Options

The removal device can be delivered with applications to tape, stack and tilt the blocks.
